First use and care

Organise manuals, accessories and checks for first use and ongoing care.

01

Get ready for first use

Keep the manuals for the hot tub, sauna, heater and any fitted accessories. Before lighting or filling, consult the instructions for your model and have the specified checks completed. Supervise wood-fired heating.

02

Plan water, cover and care

Before choosing accessories, think about how you will fill and drain the tub, where you will put the cover and how you will reach the filter if fitted. Steps, a cover or a filtration system make sense when they suit both the model and the space.

For water treatment, freezing weather, cleaning and taking the tub out of service, follow the instructions for your tub and the components installed. Keep the model details handy when contacting support.

Your checklist

First use and care

- [ ] **Manuals for the model and fitted components**
- [ ] **Required checks before filling or starting up**
- [ ] **Plan for water, filter and cover care**
- [ ] **Model reference for support and spare parts**

Project notes

Planning guide. For siting, connections and use, consult the specification and manual for the model you choose. Ask qualified professionals to carry out technical checks.
