Hot tubs, saunas and heating

Compare heat, capacity, heaters and site requirements for your space.

01

Choose how you want to warm up

A hot tub heats the water you sit in. A sauna heats the air inside a cabin. Start with how many people will use it at once, when you want to use it and where you would like to spend that time.

02

Compare heaters and power sources

Some tubs include the heater, and others can be paired with a compatible one. If you choose wood, check flue position, ventilation and clearances with the person advising on installation. For an electric option, have a qualified professional check the supply, connection and protective equipment.

03

What to include in the quote request

Include the model or configuration you are considering, your preferred capacity and the postcode. Add dimensions, access details, preferred delivery method and questions about what is included, compatibility or timing. If a price is indicative or on request, ask what the quote includes.

Your checklist

Hot tubs, saunas and heating

- [ ] **Number of users and frequency of use**
- [ ] **Heating type and checks on available utilities**
- [ ] **Included components and options to confirm**
- [ ] **Specifications and manual for the selected model**

Project notes

Planning guide. For siting, connections and use, consult the specification and manual for the model you choose. Ask qualified professionals to carry out technical checks.
